Kite

An AI-powered investment intelligence platform that puts institutional-grade portfolio analysis in the hands of individual investors. Real data, real reasoning — not generic market noise.

Fly above the noise.

Portfolio Analytics · AI Assistant · Real-Time Quotes · SEC Filings RAG · Market Intelligence · Screener

---

OVERVIEW

What is Kite?

Kite is a personal investment intelligence platform built for investors who want more than price charts. It combines live market data, SEC filing analysis, and an AI assistant that understands your specific portfolio — not generic financial advice.

Unlike platforms that require institutional access or charge thousands per year, Kite is built to give individuals the same analytical depth that professional analysts use: revenue trend analysis, earnings comparisons, sector concentration risk, and AI-generated briefs — all anchored to your actual holdings.

Portfolio-first

Every analysis is anchored to your holdings. P&L, day returns, concentration risk — calculated from your actual positions.

AI that acts

Ask questions in plain English. The assistant pulls live data, reasons over it, and navigates you to the right screen — not just text answers.

SEC Filing RAG

Ingests 10-K and 10-Q filings via EDGAR. Ask about risk factors, revenue drivers, or management commentary with cited sources.

NAVIGATION

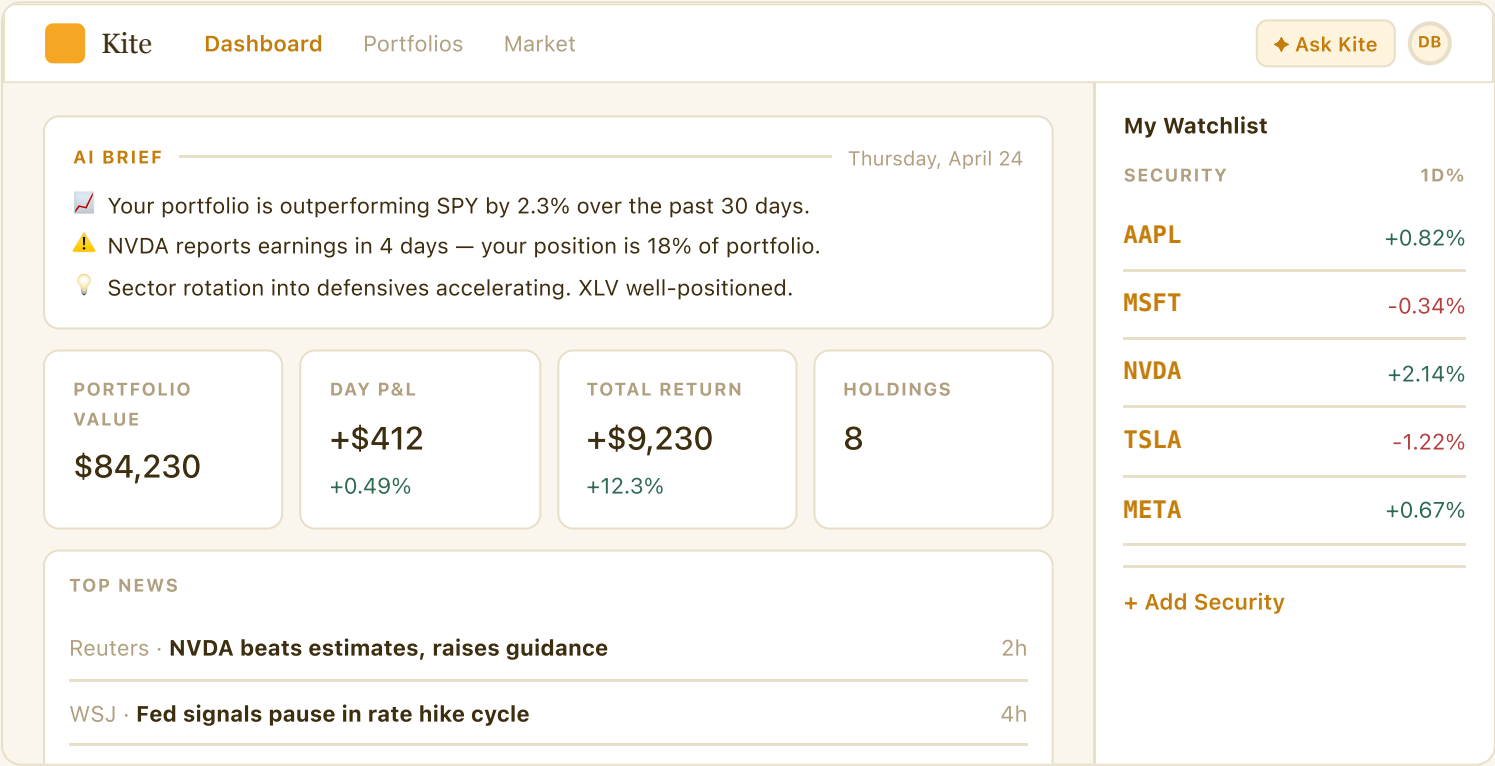
Global Interface

A persistent nav bar gives access to all screens. The global search finds any security instantly. The "Ask Kite" button opens the AI assistant panel from anywhere in the app.

SCREEN 1

Dashboard — Morning Brief

The command center. Opens every session with an AI-generated brief, real portfolio snapshot, smart alerts for your holdings, top news, and an upcoming earnings calendar. Watchlist on the right for quick price checks.



SCREEN 2

Portfolios — Holdings Table

Full holdings view with live prices. Columns include shares, average cost, market value, day P&L, total P&L, portfolio weight, and key metrics. Clicking any row opens the Company View drawer.

FEATURE

AI Assistant — Ask Kite

A persistent assistant panel accessible from every screen. Backed by Claude (Anthropic), with context from your portfolio and RAG over ingested SEC filings. Responses include action chips that open the relevant company or navigate to the right screen.

Ask Kite
AI assistant · portfolio-aware

Capabilities

What are the main risks for NVDA right now?

Kite SOURCED

Based on NVDA's latest 10-K, the key risks are: **export controls** on AI chips to China (~20% of data center revenue), **customer concentration** in hyperscalers, and **supply chain** dependency on TSMC. At 68x P/E, any guidance miss would hit hard — and earnings are in 4 days.

NVDA ↗ TSMC ↗ Open Market →

- **Portfolio-aware answers**
  Knows your holdings, cost basis, and P&L. Can answer "which of my holdings has the highest concentration risk" with real numbers.
- **SEC filing RAG**
  Ingests 10-K and 10-Q filings via EDGAR. Every answer citing a filing is sourced with a direct link to the document.
- **Navigation actions**
  Responses include chips that open a company drawer, navigate to the Market or Screener page, or highlight the relevant data.
- **Persistent across pages**
  The conversation stays open as you navigate between screens. Ask a question on Dashboard, browse to Portfolios, come back.

SCREEN 6

Screener — Filter the Market

Filter the full market universe by valuation, growth, profitability, and technical metrics. Set ranges for P/E, revenue growth, net margin, beta, and more. Active filters appear as removable chips. Results are sortable by any column.

ORCL	$124	36.8	+12.4%	21.6%

ARCHITECTURE

How It's Built

- **Frontend — React + Vite**
  Single-page app. Recharts for all data visualizations. Deployed on Vercel.
- **Backend — FastAPI (Python)**
  REST API with APScheduler for background jobs. Deployed on Railway.
- **Database — Supabase (PostgreSQL)**
  pgvector for semantic search on SEC filings. Quote and time-series cache tables reduce API calls to near-zero at scale.
- **AI — Claude (Anthropic)**
  RAG pipeline over SEC filings. Retrieves relevant chunks via pgvector, reasons with Claude, returns cited answers.
- **Market Data — TwelveData**
  Real-time quotes, historical time series, company stats. DB-first caching reduces API usage to ~26 credits/day at scale.
- **Financial Data — SEC EDGAR XBRL**
  Revenue, net income, FCF, cash, debt — pulled directly from SEC structured filings. No third-party financial data provider needed.
- **Background Jobs — APScheduler**
  Market quotes refreshed every 15 min during US market hours. Financial data re-ingested nightly at 2 AM UTC.
- **Embeddings — OpenAI text-embedding-3-small**
  SEC filing chunks embedded at ingestion time. Stored in pgvector for sub-100ms semantic retrieval.

STATUS

What's Live, What's Next

✓ LIVE

- Real-time quotes via TwelveData + Supabase cache
- Portfolio P&L with cost basis tracking
- Company View with price chart + financial charts
- SEC filing ingestion and RAG-powered AI Q&A
- Market movers and sector ETF overview
- Full-featured watchlist with drag-to-reorder
- News feed with sentiment and source filtering
- Global search and AI assistant panel
- Dark mode and profile customization

→ ROADMAP

- Screener with real data (filter full market universe)
- Agentic AI assistant with tool calls and navigation actions
- Portfolio analytics: sector allocation, correlation heatmap
- AI-generated morning brief (personalized, daily)
- Real earnings calendar from SEC/financial API
- Price alerts and threshold notifications
- Mobile-responsive layout
- Multi-portfolio support
